

Reporting

Key Access provides instant access to your fleet data with a complete range of reporting preferences from the interactive dashboards to detailed management reports and colour coded exception reports, it's your choice!

The reporting suite is designed to assist you with the monitoring and control of fleet efficiency, not just administration.

- **Exception Reports** – save you time and money. The reports have been specifically designed to monitor and manage exceptions during the life cycle of your fleet from service to maintenance and of course fuel costs.
- **Advance Warning Reports** – designed to maximise your fleet efficiency and manage your risks. From the schedule of future terminations and vehicle replacements to services due and overdue and, right through to forecasts of vehicles travelling outside of their estimated kilometre usage.
- **Management Reports** – providing access to pertinent fleet data these reports help you to make informed decisions.
- **Statistical and Analytical Reports** – we have taken care of the hard work to provide you with meaningful and actionable information. Compare data for a nominated period as well as 'life to date' for a single vehicle or the entire fleet. Prefer running cost calculations on a cents per kilometre basis? Easy, our vehicle analysis report takes care of this as well.
- **Viewing Options** – Analyse the reports on screen, print or choose to download to PDF or Microsoft Excel.
- **Flexibility** – One of the standout benefits of our online reporting suite is the ability to access your own fleet data and create ad-hoc reports to address specific circumstances or needs.

The system offers unparalleled flexibility with over 50 reporting parameters and of course, our dedicated Relationship Teams will be happy to assist with the generation of customised reports, as and when requested.

Express View

Custom Fleet's interactive reporting service Express View provides you with the following functionality:

- A quick view of alerts, exceptions, efficiencies and performance for your fleet
- A snapshot and a trend month to month of your fleet exceptions, efficiencies and performance
- An automatic email when alerts, exceptions and efficiencies have exceeded their Watch list
- Email burst functionality – ability to email multiple drivers regarding services overdue, invalid odometer readings, exceed tank capacity and premium fuel usage
- The ability to request modification quotes for vehicles which are travelling over/under km deviation

Functional Applications and Tools

View, update and initiate requests online, anytime and at your convenience.

Key Access provides the ability to update driver and cost centre details, transfer vehicles between accounts, order leased vehicles and Fleet Cards, report lost and stolen Fleet Cards and order replacement cards. You are also able to submit a transport request for a vehicle and send an enquiry through to your dedicated Relationship Team.

Summary

Key Access has many advanced capabilities and is constantly evolving based on product and service changes and feedback provided by our customers. This evolution keeps the functionality current and complements the personal service provided by your dedicated Custom Fleet Relationship Team.
